Art Unit: 1646

1) Claims 24 to 35 are pending in the instant application. Claims 9 to 23 have been canceled and claims 24 to 35 have been added as requested by Applicant in the correspondence filed 21 June of 2004.

2) Any objection or rejection of record that is not expressly repeated in this action has been overcome by Applicant's response and withdrawn.

3) The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4) Claims 24 to 35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. These claims contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The limitation "said second cell line also has inhibited G_s signaling of u-PA activity" has no basis in the instant application as filed. This language was not present in the application as filed and constitutes a new inventive concept because it does not inherently flow from the original disclosure.

The text on page 17 of the instant specification described the two cell lines employed in the majority of experiments disclosed therein. Those cell lines were described on page 17 of the specification as "two representative cell lines, HKRK B7 and HKRK B28, which express 950,000 and 280,000 hPTHR per cell, respectively".

Art Unit: 1646

There is no indication that either of those cell lines had "inhibited G_s signaling of u-PA activity".

The only other cell line employed in a comparative manner was described on page 25 of the instant specification as "AB45 cells" "in which human PTHRs (370,000/cell) were co-expressed with REV AB, a dominant-negative inhibitor of both basal and hormone-stimulated protein kinase A (PKA)". The text on page 10 of the specification states that "in LLC-PK1 cells, both the PKA and PKC pathways are linked to U-PA production" and that " G_s and G_q proteins activate the PKC pathway and thereby increase U-PA production in LLC-PK1 cells". Therefore, one would not conclude that AB45 cells had "inhibited G_s signaling of u-PA activity" since G_s activates the PKC pathway and it was the PKA pathway that was inhibited by the heterologous REV AB gene in those cells.

If Applicant can identify that portion of the instant specification, as filed, which serves as a basis for the limitation "said second cell line also has inhibited G_s signaling of u-PA activity" they are encouraged to do so in response to this action. Those portions of the specification that were identified by Applicant in the correspondence of 21 June of 2004 as providing support for the new claims have been carefully reviewed and they do not support the limitation "said second cell line also has inhibited G_s signaling of u-PA activity".

5) Claims 24 to 35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. These claims are vague and indefinite

Art Unit: 1646

because the limitation "has inhibited G_s signaling of u-PA activity" requires a point of reference, such as "relative to said first cell line", and none is given.
